# IT–Security – Managed Firewall Services

A firewall protects your data and virtual business processes from network attacks. For continuous reliability, the system must be up to date and maintained by experts. Save your time and resources with the Managed Firewall Service from MSP.

**Fend off threats** | Our Managed Firewall Service prevents system or system downtimes that can be caused by cyber attacks such as malware, viruses or worms.

**Protect against data theft** | The firewall monitors all ports that could be used by uninvited guests to access sensitive company data – at the company, home office or external appointments. VPN makes secure and flexible work possible.

**Regular updates** | Our specialists perform regular and tested updates. This eases the workload of your IT  and keeps your firewall up–to–date at the same time.

**Save time and money** | Benefit from our rental model and save the cost of purchasing your own hardware and licenses. We take over the installation, maintenance and responsibility for the firewall (liability shifting).

## Advantages:

▶ Rent instead of buy: no investment in your own firewall.

▶ Operated by certified professionals: MSP takes care of installation and maintenance.

▶ Comprehensive coverage without the need for your own specialist staff.

▶ Always up to date: Updates during the entire rental period.

▶ Fast update cycles and daily configuration backup.

▶ Ideal for SMEs: scalable to your requirements.
